DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-9, drawn to a process for transforming a part of a target semiconductor substrate to be a non-semiconductor material, classified in class 438, subclass 758+.
- II. Claims 10- 35, drawn to an apparatus classified in class 250, subclass 493+.

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In the instant case, the apparatus as claimed can be used to practice another and materially different process, such as a process which does not require that the semiconductor material thereon be transformed to be a non-semiconductor material. And the process as claimed can be practiced by another materially different apparatus, on by hand, such as an apparatus which does not require a mask set exposed to the high energy source and the electro-magnetic radiation source, the mask set having at least one mask with at least one alignment area and at least mask target area thereon, the mask target area passing more high energy particles than any other area of the mask.

Because these inventions are distinct for the reason given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reason give above and the search required for Group I is not for Group II, restriction for examination purposes as indicated is proper.
